

FUTURE CITY

Our school's STEAM Society participated in The Future City® Hong Kong and Macau Regional Competition 2024, organized by the Knights Foundation, and represented Hong Kong in The Future City® China 2024 hosted by the Beijing National Speed Skating Oval on 13-15 December 2024. Students worked in teams to address real urban issues, conducting research and designing a future city that integrates the 17 Sustainable Development Goals. They presented their results in the form of models and papers to national experts, media, and audiences, achieving the following accolades in the competitions:

The Future City® Hong Kong and Macau Regional Competition 2024

- ✓ The Best Styling Award
- ✓ The Best City Model Award
- ✓ The Best Performance Award
- ✓ 1st runner-up

The Future City® China 2024

Second Prize

In this competition.....

We learnt about the future of sustainability and reflected on the current environment.

FAN CHING YI (4B)

I am very honored and excited to receive this award. I would like to thank the organisers and the school for their appreciation. It is a recognition of my efforts and a motivation for me to continue to move forward.

LUO HO SHING (4A)

I have learnt that persistence and hard work are the key to success, and I have learnt how to co-operate with the team, support each other and work hand in hand.

XIE KA YAN (4A)

I learnt not only the skills of model making but also the importance of teamwork.

CHEN YUEYUN (4B)

I learnt a lot about the future development of the city, urban planning and future urban design.

YANG GE (4A)

I have learnt a lot about the future development of cities and a lot of urban planning, future urban design and so on. I look forward to drawing the blueprint of an ideal city on a wider stage with this initial heart.

DENG MAN HEI (4B)

Teacher's message.....

I hope that this competition trip will allow them to deepen their understanding of urban design and sustainable development in practice. By competing with teams from all over the country, the students were not only able to showcase their creativity and hard work, but also learnt from other teams' good ideas and solutions. During the competition, I also observed that they learnt how to conduct data collection, teamwork and problem solving. In addition, their public speaking skills were enhanced and they learnt how to effectively present their work to the experts and the audience. This experience not only enhanced their skills, but also stimulated their thinking and passion for the city of the future.

Mr Chan Kei Yam

As a teacher, this competition was a rare opportunity and a valuable experience for me. I was very pleased and proud to see the creativity and hard work of my students in the competition. Not only have they gained a deeper understanding of urban design and sustainability, they have also learnt to collaborate, solve problems and improve their public speaking skills.

The competition was not just a competition, but a valuable learning journey. I was touched by the growth of the students from their initial uncertainty and challenges to their ultimate confidence and success. As their teacher, it was invaluable to witness their growth and progress. I am confident that this experience will be an important turning point in their lives, inspiring them to continue to strive and move forward in their future studies and lives.

Mr Bryan Chiang
